

Celebrating Success

Kenneth Noland
with Karen VanSickle, PTA
and Komal Pande, PT

"My knee surgeon, Dr. Berend, referred me to therapy because the swelling in my legs made it impossible for him to perform my knee replacement. Therapy has really made a huge improvement on my edema to reduce swelling in my legs, knees and ankles. I saw my doctor last week and he was impressed with how much it's gone down and my progress. The therapists did a great job here. Everyone is always smiling and they all have a great attitude. They make it very comfortable for everybody. I'm very impressed."

"Therapeutic treatment for lymphedema focuses on reducing swelling and controlling pain due to fluid retention. Treatment sessions involve manual therapy, light exercise and application of kinesio tape and compression wraps to promote lymph fluid drainage." Karen VanSickle, PTA
